EDUCATION

University of Maryland, College Park

College Park, MD

Bachelor of Science in Information Science, GPA: 3.95

Expected May 2028

Awards/Honors: 2x Semester Dean's List Award Recipient

Relevant Coursework: Object Oriented Programming, Database Modeling

TECHNICAL SKILLS

Programming Languages: Python, Java, HTML, R, SQL

Software: ServiceNow, Visual Studio Code, Linux, Jupyter Notebook, GitHub, Microsoft Office, Power BI

General: Troubleshooting, Customer Service, Collaboration, Time Management, Technical Communication, IT Incident Management, Process Administration, Data Analysis

WORK EXPERIENCE

Lead Software & Hardware Support Technician

Sep 2025 – Present

University of Maryland: Division of Information Technology; College Park, MD

- Manage IT incident management lifecycle within ServiceNow, ensuring high-quality service delivery and meeting resolution SLAs.
- Lead the talent acquisition lifecycle, conducting interviews and facilitating orientations to ensure technical and cultural fit for new hires.

General Software & Hardware Support Technician

Jan 2025 – Sep 2025

University of Maryland: Division of Information Technology; College Park, MD

- Delivered front-facing IT support for **100+** students and faculty, resolving cross-platform issues across Windows, macOS, and Linux environments.
- Executed core system maintenance, including reimaging loaner fleets and deploying enterprise software suites under strict time constraints.
- Optimized service desk workflows by collaborating with a team of 15 technicians to troubleshoot and escalate software problems via ServiceNow.

PROJECTS

Workout Tracker

- Implemented Data Persistence by mapping Python objects to structured storage (Excel) using the Pandas library.
- Applied PEP 257 standards by documenting the codebase with comprehensive docstrings for improved maintainability.

2026 Cherry Blossom Peak Bloom Forecasts (WSS Hackathon)

- Engineered a Python-based data pipeline to ingest and process over 50 years of longitudinal climate data from the NOAA API, ensuring a robust historical baseline for the 2026 forecast.
- Integrated real-time 2026 atmospheric data with historical sets to identify a 0.85+ correlation between late-February warming trends and accelerated bloom cycles.
- Collaborated in a 3-person sprint to move from conceptualization to a finished predictive model in under 24 hours, delivering the project ahead of the final submission deadline.

LEADERSHIP AND PROFESSIONAL DEVELOPMENT

Lead Software & Hardware Support Technician

Sep 2025 - Present

University of Maryland: Division of Information Technology; College Park, MD

- Supervise and mentor a team of **10** student technicians, serving as the primary technical escalation point for complex OS reinstalls, network infrastructure, and enterprise licensing.
- Manage performance and administrative workflows, including semester-wide scheduling and personnel evaluations for veteran and new technicians.
